Projects:

PATIENT PORTAL - JAVA , JAVAFX, MYSQL

- Authenticate users before displaying sensitive information and alert user of any upcoming appointments.
- Reads users system location and timezone to alter components within the GUI to cater specifically to their timezone and language.
- Gathers data on the patient, and provides the user with the ability to generate appointments and reports on each patient. Appointment information can be filtered by day, week, or month.
- Generates reports of information that a doctors office may find useful such as total patients with pending appointments, and contacts assigned to each patient.

WODHUB - JAVA, JAVAFX, MONGODB

- Provides Scheduling and workout data for CrossFit gyms.
- Contains Sign in features for Coaches to be able to track class sizes.
- Workout tags retrieve instructional videos on basic movements.
- Provides real time leaderboard for members who wish to log their scores.
- Allows comments and reactions to leaderboard statuses.

TIP CALCULATOR - KOTLIN

- Creation of Android application that will calculate a tip based on the bill total and tip percentage.
- Will allow the user to split checks when there is a large group.

Education

Western Governor's University | Computer Science | 2022 - Expected Graduation: May 2023
